

Multi Backup

Product Brochure

Secure • Incremental • Cross-platform

RELEASE CANDIDATE 1 | EN | NOVEMBER 2026

One app. Multiple backup sources.

Multi Backup brings encrypted, resumable and incremental backups together in one modern native workspace.

GITHUB / Complete repository and CI recovery

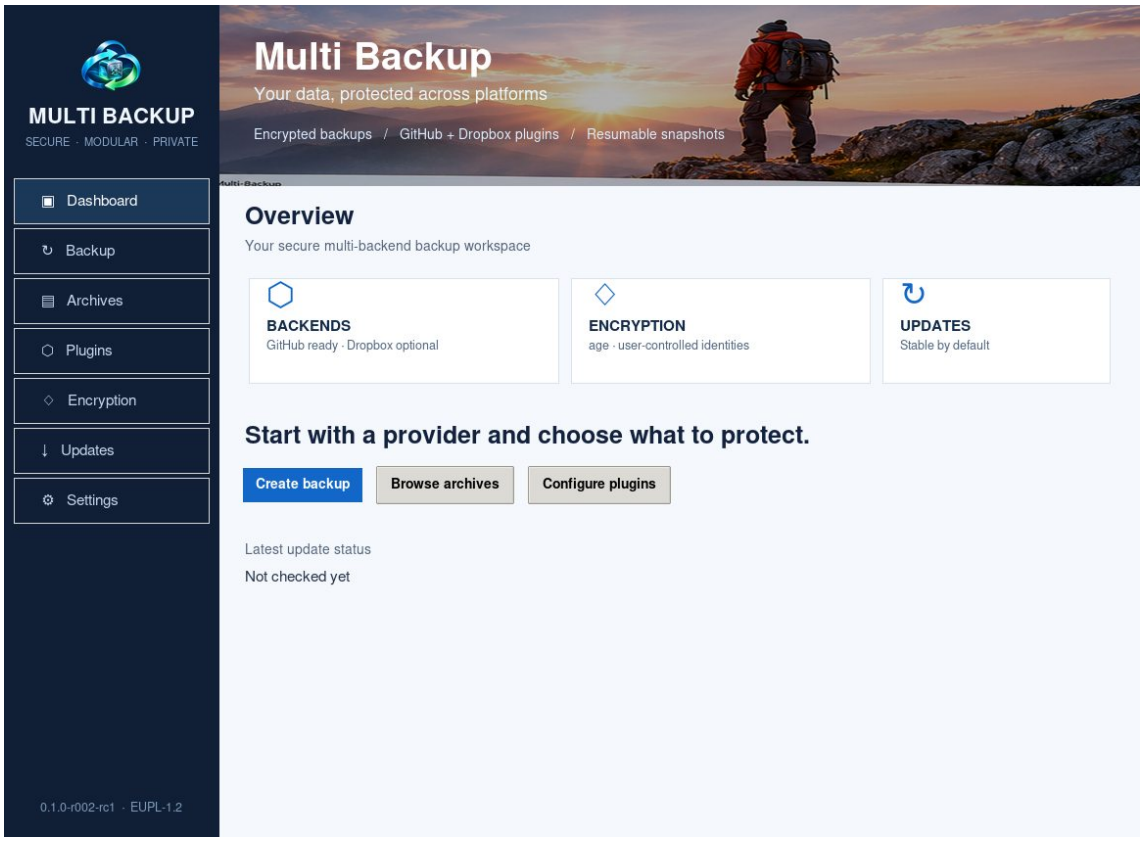

Git mirrors, release assets, metadata, issues/PRs and optional cleanup of historical CI artifacts.

DROPBOX / Incremental file versions

Opt-in read-only plugin: changed revisions are encrypted once and safely reused in later cycles.

ENCRYPTION / Your keys, your control

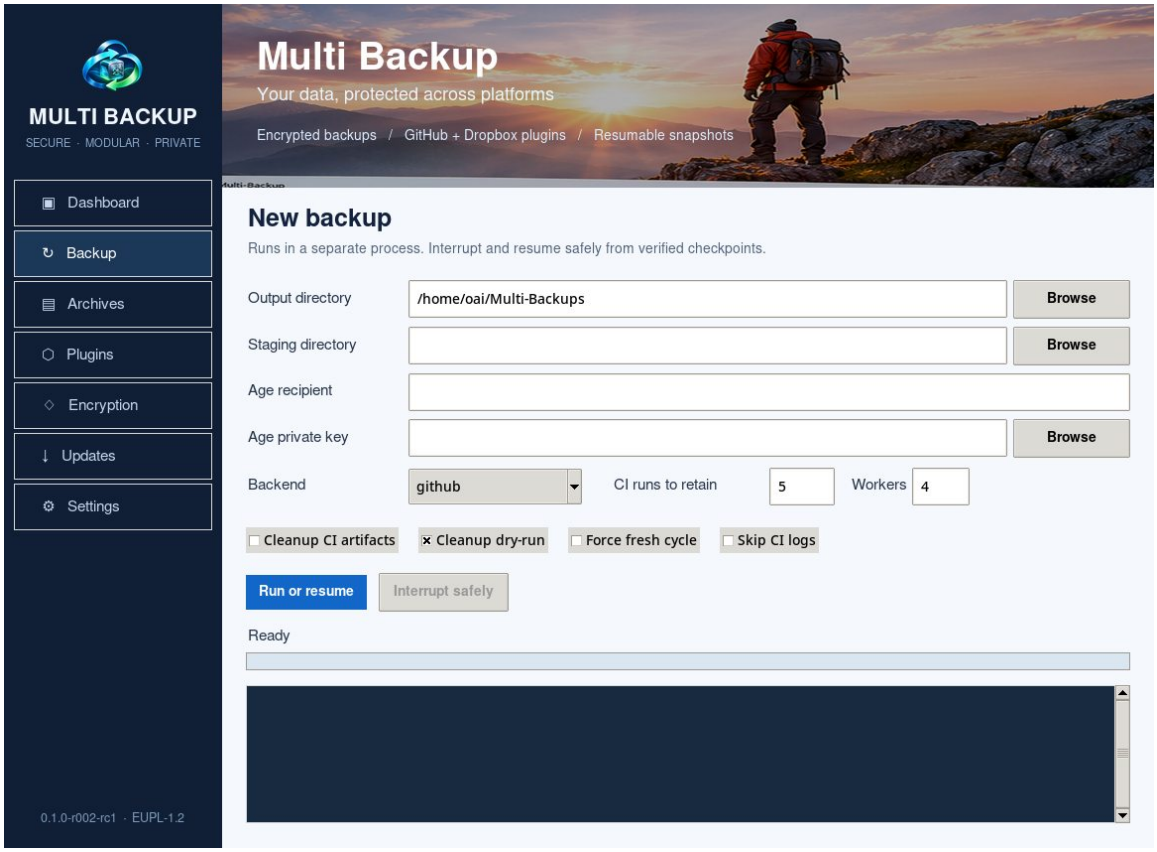

Age X25519 encryption, private key generation, separated credentials and atomic output verification.

Actual application screen, RC1.

Engineered for clarity and control

The native interface provides clear status, quick actions, plugin choices, and archive exploration. A verified checkpoint makes an interrupted backup restartable without discarding finished encrypted shards.

Backup operation and progress

PROTECT & BROWSE

Explore finished archives, inspect metadata, restore a Git working tree and manage the keys you need for recovery.

From source to recoverable archive

01 SELECT

Choose a GitHub or Dropbox plugin.

02 ENCRYPT

Encrypt each successful shard with age.

03 VERIFY

Check SHA-256 and record a checkpoint.

04 EXPLORE

Browse, extract, checkout or mount for recovery.

RELEASE CHANNELS

Early release: commit on main containing [full-ci]. Stable: push a stable version tag. macOS (ARM/Intel), Windows 11 x64 and Rocky/AlmaLinux 8-10 are part of the native build matrix.

Release candidate: platform signing, notarization, installer end-to-end tests and fully unattended updates are pending.
